

## Introduction to Cloud-Based Content Creation

**Cloud content creation:** is essentially on-demand availability of computer system resources and services you can use online to create cloud content. It allows you to create different types of projects and store your own music, videos and photos.

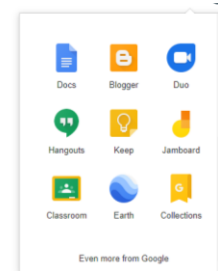

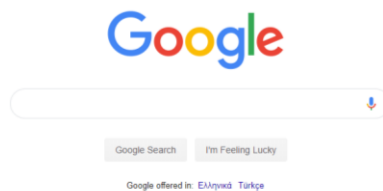

**Tip:** You only need an internet-connected device to access the cloud.

### Cloud-Based Content Creation:

**Use the following instructions to create your own account:**

1. Log in to your Google account (If some students don't have a Google Account follow the instructions to create one)
2. Locate "Docs"

3. Upload your document or create a new one
4. Try to upload a photo, music or video for embedding in your document
5. Your document will be automatically saved.

### Why use the Cloud?

- Uploading and creating new documents on the cloud can protect your important files from:
  - Viruses and accidentally losing files
  - Cloud services like Google Docs run continuously and back up automatically.
- Equally important, you don't have to search for the most recent versions of your documents.
  - Easily access and share your documents between different devices.
- Digital technologies can help you be more organized and enhance your digital practical skills.
