

Digital Technology in Citizenship

Using Information: A good digital citizen evaluates and validates information according to its sources and uses it to form fact-based opinions.

Promoting Open-Mindedness: A good digital citizen is willing to consider different opinions, does not live in closed filter bubbles and supports the concept of open communities devoid of hate and prejudice.

Civic Engagement: A good digital citizen takes part in civic engagement by using online channels in order to promote positive societal changes and takes the initiative to prevent common injustices like cyberbullying, hate speech or spreading fake news.

Digital Etiquette: A good digital citizen knows about the challenges of social interactions online and is informed about social norms within technical environments.

Legal Knowledge: A good digital citizen understands that laws, rights and duties apply to the online world, even when acting anonymously.

Digital Security: A good digital citizen uses electronic precautions in order to protect themselves.

Digital Education: A good digital citizen actively learns about new technologies, how to use them and how they might potentially affect our everyday life.

Respecting Health: A good digital citizen balances online and offline activities in a healthy and responsible manner.
